## **How to Choose a Speech Sound Therapy**

www.SpeechAndLanguageKids.com

## **Additional Speech Sound Therapy Method:**

The above flow chart represents the most common 4 types of speech sound therapy. This framework should be used as a starting point but does not need to be followed exactly. Other speech sound therapy methods are available that may work better for some children. Here are a few of them:

- Contextual Utilization
- Minimal Oppositions Contrast Therapy
- Maximal Oppositions Contrast Therapy
- Treatment of the Empty Set

- Multiple Oppositions Contrast Therapy
- Distinctive Feature Therapy
- Metaphon Therapy
- Naturalistic Speech Intelligibility Intervention

For more information about these other types of speech sound interventions, visit the ASHA site:
